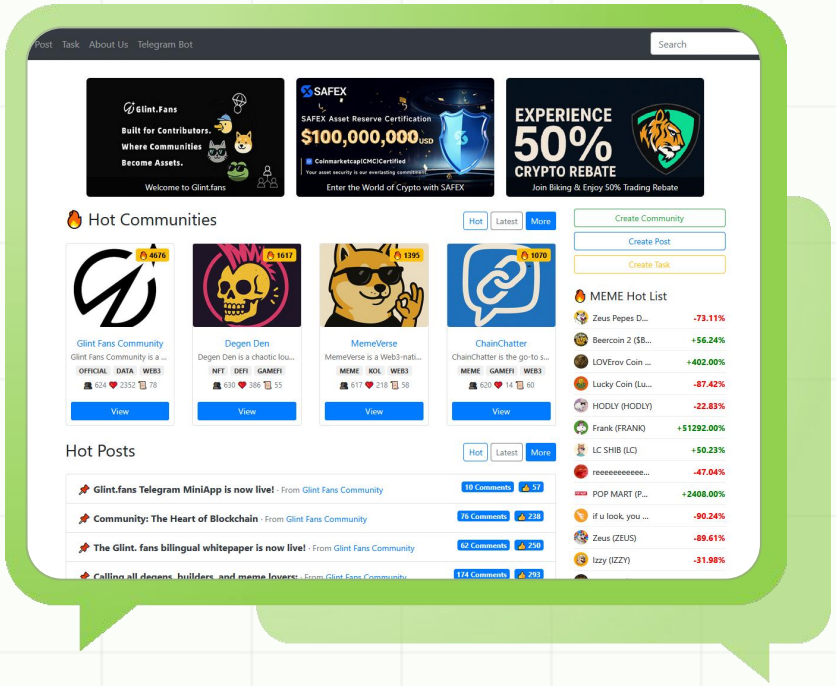
Project Overview & Core Philosophy

Built for Contributors — Turning Communities into Real Assets!

What is Glint.fans?



Glint.fans is a **Web3-based value-driven community aggregation platform**. It empowers users to earn exclusive community contribution points through activities such as posting, engaging, and completing tasks. These points allow users to participate in periodic Token distributions from each community' s dedicated Token Pool — making community value directly tied to individual contributions.

On **Glint.fans**, users are no longer just content creators — they are co-builders and beneficiaries of their communities. We make actions measurable, value accumulable, and contributions rewarded, redefining the Web community model with a new paradigm: "**Built by everyone, rewarded for everyone.**"

Project Vision & Core Mission

Our Mission:

To ensure every genuine contribution to a community is measurable and rewarded.

No more working for free. No more being exploited by centralized platforms.

We’ re redefining the value of participation.

Our Vision:

To build a collaborative ecosystem where “**community is an asset**”, and every user is not just a voice, but a **co-builder**, **governor**, and **beneficiary** of the community.

Our Value Flywheel:

From content to community-owned assets — a five-step cycle of growth:

Content → Collaboration → Contribution Value → Incentives → Governance → Repeat

What Problems Are We Solving?

Core Flaws of Traditional Web2 Communities	Traditional Community Platforms	Glint.fans
User Contribution Ownership	Content popularity benefits the platform; users earn nothing	User actions convert into contribution value and shared rewards
Lack of Community Assets	Content piles up with no economic structure	Each community has its own independent Token pool
Low Collaboration Efficiency	No task loop; governance is chaotic	Built-in community task system + participatory governance mechanism
Broken Incentives	No rewards; weak user retention	Actions generate value; periodic community Token pool reward mechanism

Traditional Platforms: Rely on viral traffic and trending content.

Glint.fans: Built on co-creation and shared rewards.

02

User Experience & Application Scenarios

Users Are Not Just Visitors — They Are Collaborators and Beneficiaries

What Can I Do on Glint.fans?

From **ordinary user** → **value contributor** → **reward participant**,
creators and contributors work hand-in-hand to grow the community.
Every action translates into real contribution value —
say goodbye to free-rider traffic and help build a sustainable, value-driven community.

Create Community

Gain control over your own dedicated Token Pool.
As a creator, you'll receive a contribution bonus to kickstart your territory of value

Post & Interact

Every post, comment, and like boosts your personal contribution score,
increases community visibility, and grants you higher share weight in content rewards.

Community Tasks

Create or accept exclusive community tasks.
Earn Token rewards instantly upon completion —
while increasing both community engagement and contribution.

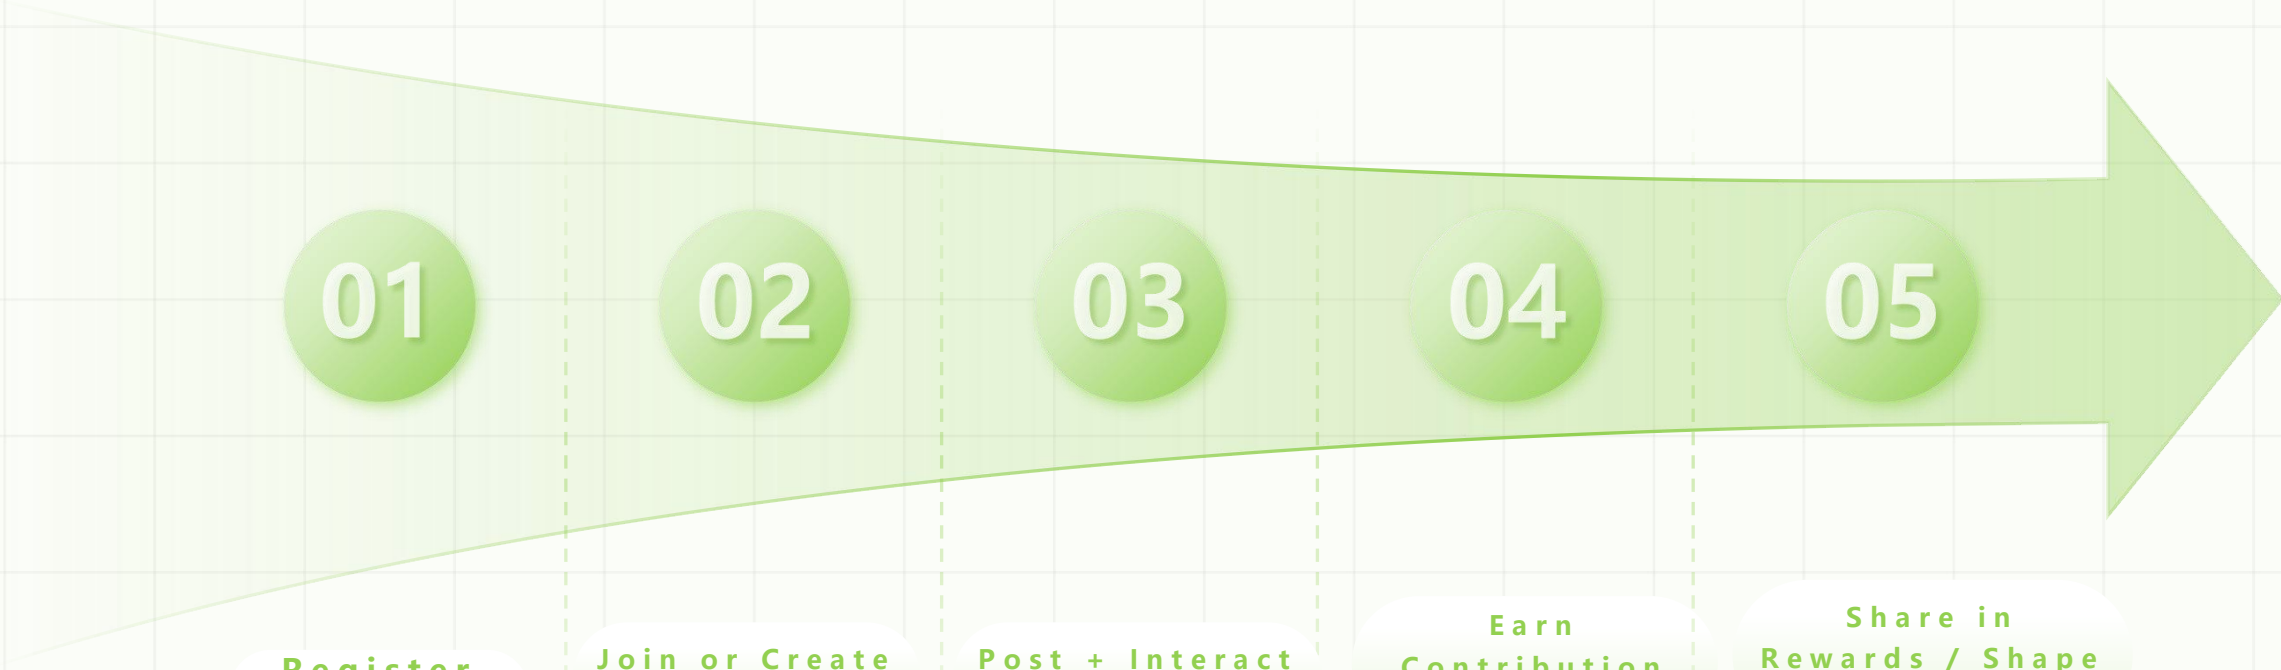
Crypto Intelligence

Hyperliquid whale tracking, top MEME rankings, major token prices, and latest CEX trends.

Contribution Dividends

Weekly rankings based on contribution scores.
Earn a proportional share of the community Token Pool —
and gain visibility through leaderboard highlights.

How Do I Earn Value on Glint.fans?



01 Register Account

Sign up with your email in one click — instantly generate your on-chain identity and start your community journey.

02 Join or Create a Community

Join communities you're passionate about,
or create your own and start building from day one.

03 Post + Interact Take on Tasks

Contribute to the community by posting,
commenting, liking,
or completing tasks designed to boost engagement.

04 Earn Contribution Points

Every meaningful action converts into contribution value within the communities you participate in.

05 Share in Rewards / Shape Governance

Earn periodic rewards from your community's Token Pool,
and take part in governance to help shape its future direction.

Traffic Laborer vs. Value Co-Creator

On traditional platforms

- users are merely content creators and traffic generators.
- All the value flows back to the platform
- no revenue sharing, no governance rights.
- You generate attention, but get none of the rewards.

VS

On Glint.fans

- **Every action is converted into a traceable contribution score.**
- **Your contribution score defines your rewards and governance power.**
- **The system tracks your reputation as a valuable community asset.**
- **Users become co-builders, beneficiaries, and digital stakeholders.**

03

Mechanism Design & Differentiation

Transforming Interaction, Collaboration, and Governance into Real Value Flow

How to build a truly valuable community?

Interactive Contribution

User actions such as posting, commenting, and completing tasks are instantly converted into contribution scores within their respective communities.

Contribution-Based Rewards

Your contribution score directly affects your share of community rewards, governance power, and status within the community — forming a self-reinforcing incentive loop.

**We don’ t sell hype.
We offer a sustainable community system where value can be continuously accumulated and shared.**

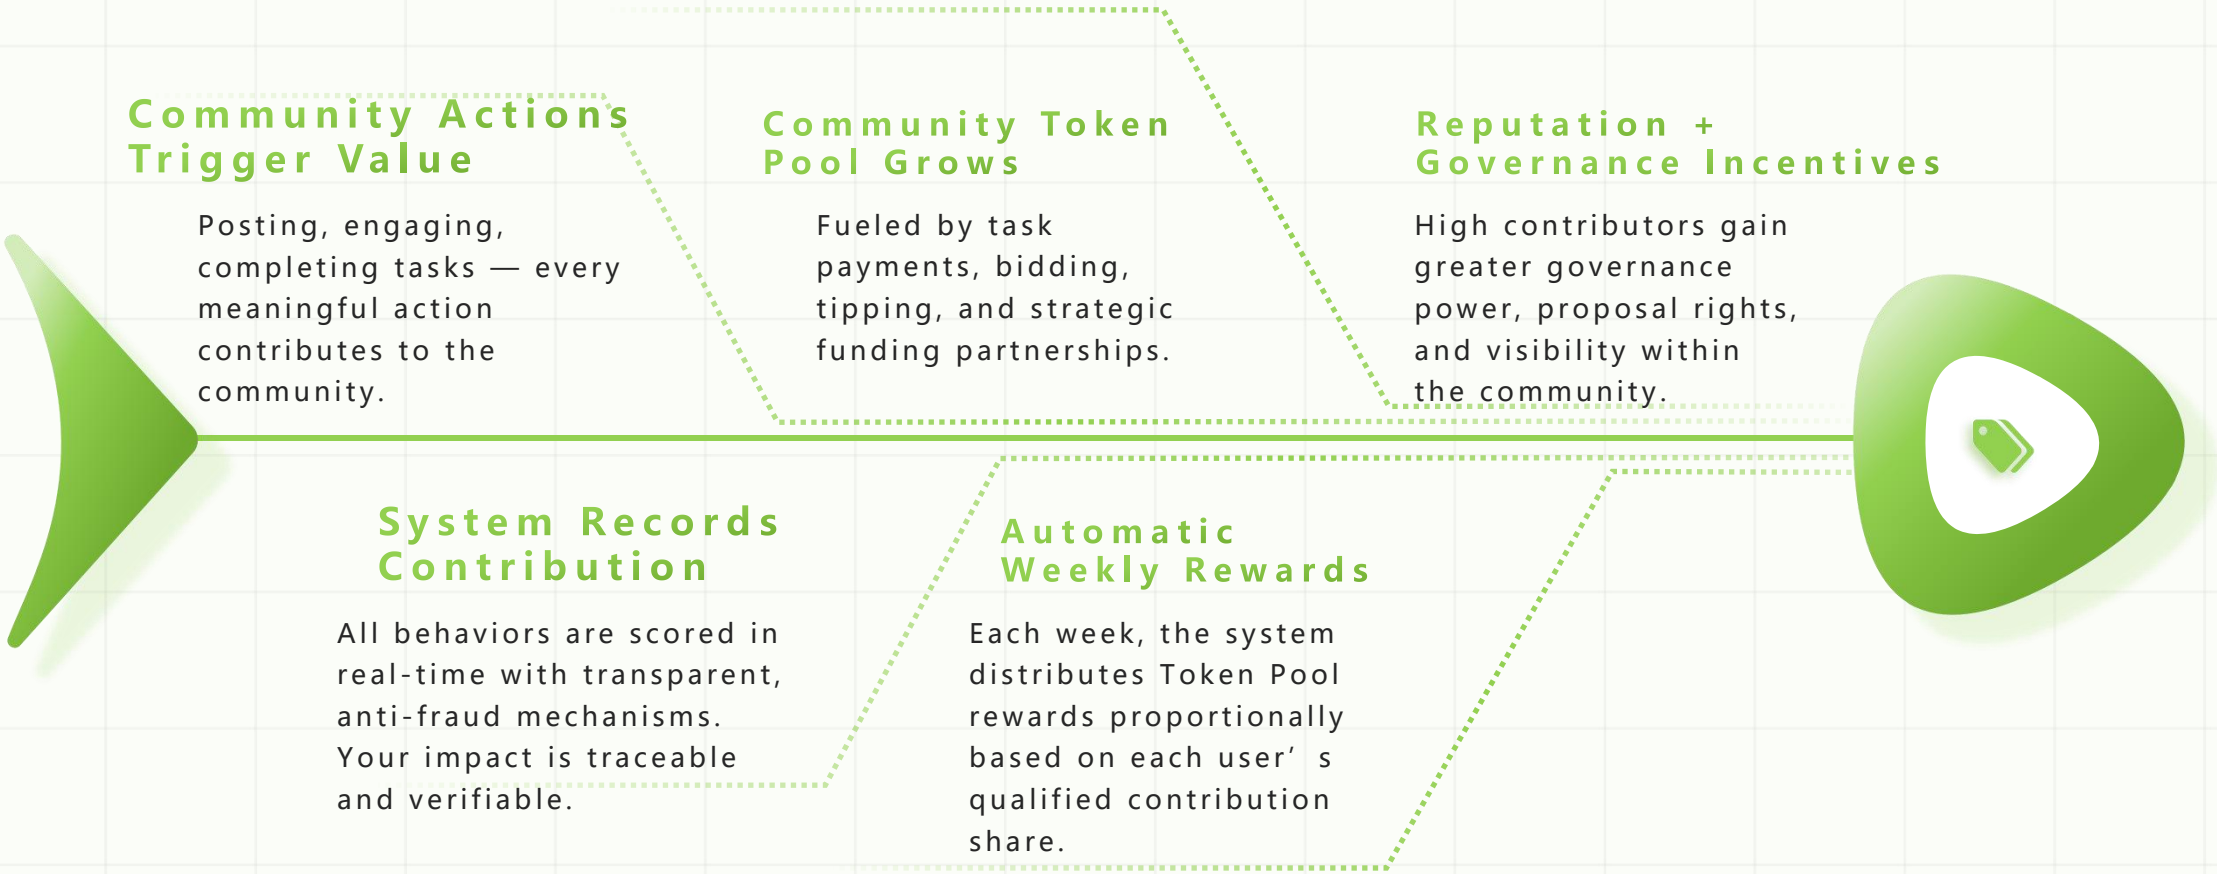
Value Accumulation

Glint.fans discourages short-term “farm-and-leave” behavior.
Through mechanisms like daily activity limits, weighted scoring, and anti-abuse protection, users are guided to focus on consistent, meaningful participation.

Co-Creation and Co-Ownership

All rewards are distributed from the community’ s own Token Pool.
Users must understand: the value you claim is the value your community creates — together.

A Seamless Value Loop — From Actions to Rewards



Our Advantage Goes Far Beyond Just “Incentives”

Module	Traditional Platforms	Glint.fans
Content Ownership	Content belongs to the platform	**User-generated content becomes shareable assets**
Incentive Model	No real rewards	**System-issued Tokens are claimable as rewards**
Governance Rights	Users have no voice	**High contributors can vote and propose**
Community Assets	No Token-based community assets	**Each community owns an independent, transparently growing Token Pool**

Glint.fans turns participation into ownership
empowering every member to become a community builder and beneficiary.

Contribution Scoring Mechanism

User behaviors are tracked and converted into community contribution scores:

You must publish at least 3 posts to activate your contribution score.

Only contributors with 100+ points are eligible for Token Pool rewards.

Behavior Type	Scoring Mechanism
Community Creation	Become a community founder: +50 points initially
Posting & Interaction	Posts with heat ≥ 50 are considered valid:+3 points per post， +0.5 per like, +1 per comment
Task Initiation	If someone completes your initiated task and it's approved: +10 points
Task Completion	Complete an approved task: +1 point per task
Community Tipping	Points vary based on the amount of tokens tipped to the community

Community Token Pool Mechanism

Build together. Earn together.

A shared-value model powered by contribution.

Source of Token Pool	Revenue Ratio	Description
Community Tasks	20% of total task value	Every task must be linked to a specific community
Community Tipping	100% of user tipping amount	Built through member consensus and support
Promotion Bidding	50% of banner & promotion bids	Revenue from competitive placement of marketing banners
Community Sponsorships	100% of partner contributions	Provided by partner service providers

Community Task Distribution Model		
Task Completer	70%	Direct reward to the user who completes the task
Associated Community	20%	Contributed to the community's Token Pool
Glint.fans	10%	Platform services and operational support

04

Glint.fans Development Roadmap

Building a Sustainable Ecosystem for a Multi-Chain Collaborative Future

Core Features in the Beta Phase

1

Community System

Users can freely create or join interest-based communities.

2

Task System

A complete loop of task creation, claiming, review, and Token-based rewards.

3

Contribution Mechanism

Real-time behavior scoring with a transparent, publicly verifiable algorithm.

4

Community Token Pool

Weekly automatic Token distribution based on each member’ s contribution score.

5

On-Chain Wallet System

Every user receives a unique on-chain address upon registration, with full support for deposits and withdrawals.

6

Website + Telegram Bot

Dual-access experience enabling both platform engagement and community interaction.

2025–2026: Evolving into a Multi-Chain Collaborative Value Network

2025 Q3

Official launch of the DAO governance system, enabling open community proposals and voting.

2025

2025 Q4

Rollout of the mobile DApp, enhancing the integrated experience with the Telegram Bot.

2025

2026 Q1

Launch of the Community NFT Reputation System, empowering users with on-chain identity assets.

2026

2026 Q2

Achieve multi-chain support, integrating with BNB, Polygon, and Base networks.

2026

2026 Q3

Release of the Task API & Developer SDK to expand ecosystem integration capabilities.

2026

2026 Q4

Establishment of an open collaboration protocol combining Content + Tasks + Governance,
positioning Glint.fans as the foundational layer for community-driven incentive platforms.

2026+

05
Glint.fans Partnership Models

Co-Building an Open Network, Sharing Long-Term Incentive Value

Who We're Looking to Partner With

DAO & Guild Organizations

Organizations seeking to integrate tasks, collaboration, and economic incentive mechanisms.

Content Platforms & Community Media

Platforms looking to enhance creator rewards and foster lasting community engagement.

Investment Institutions

Strategic capital and advisory partners focused on long-term growth and ecosystem support.

Tool-Based Platforms & API Providers

Infrastructure teams aiming to plug into task execution and reward distribution mechanisms.

Ecosystem Gateway Projects

Partners providing multi-chain infrastructure, wallets, or social onboarding channels.

The Value of Partnering with Glint.fans

What You’ll Gain by Collaborating with Us

Share in Growth Upside

Partners participate in the value created by user growth and platform incentives — including Token rewards, traffic exposure, and task-based commissions.

Connect with Real Communities

We don’t rely on airdrop farming or inflated metrics. All partnerships are grounded in real engagement, fostering long-term user retention and community reputation.

Build a Composable Ecosystem

Partners can integrate Glint’s multi-chain task engine, contribution scoring system, and NFT reputation modules to create synergistic, value-aligned experiences.

Transparent & Trustworthy Mechanics

All reward and incentive mechanisms are publicly documented, transparently executed, and on-chain verifiable — eliminating manual interference.

Flexible, Custom Integration

Easily onboard your community or project’s Token into the Glint ecosystem, enabling holders to participate in reward distribution and drive deeper engagement.

Glint.fans is your strategic partner for scaling Web3 collaboration, unlocking real user value, and turning communities into lasting digital assets.

Our Open and Flexible Collaboration Framework

Token Locking, Swaps & Incentive Distribution

Support for token lockups, mutual swaps, and co-designed incentive mechanisms to drive long-term, aligned growth.

Joint Community Campaigns

Collaborate on co-branded community events to boost visibility, share user bases, and co-create task-based engagement.

Multi-Scenario Ecosystem Integration

Enable use cases like content distribution, data syncing, and reward mirroring across platforms and tools.

SubDAO Governance & Cross-Community Incentives

Support for delegated SubDAO governance and multi-community incentive coordination to expand consensus-driven ecosystems.

SDKs for Task & Contribution Engine

Provide plug-and-play SDKs to integrate Glint’ s task system and contribution scoring into existing platforms and extend their incentive infrastructure.

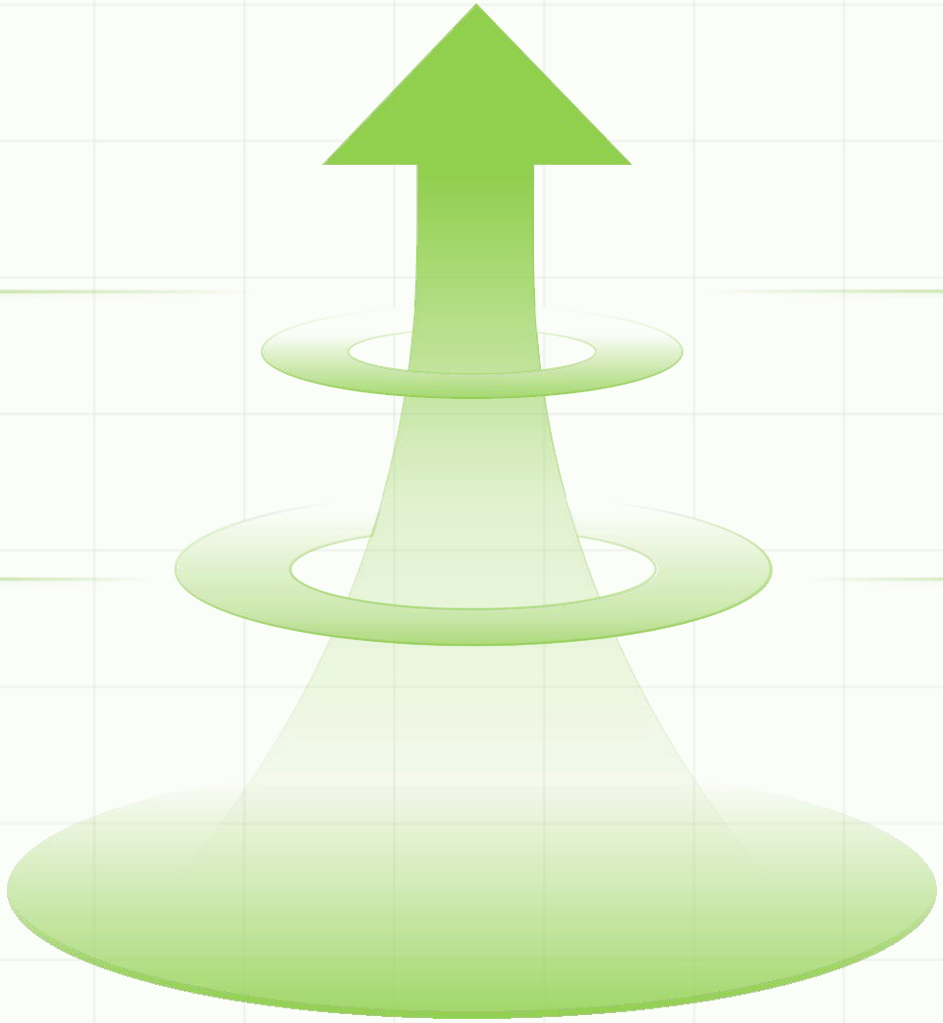
Commitment to Security & Compliance

Transparent Community Token Pools

All reward distributions from community Token Pools are recorded in real-time and openly displayed within each community — traceable and verifiable by all members.

Contribution Risk Control System

Built-in behavior monitoring and scoring engine helps prevent task farming, fraudulent activities, and abnormal operations.



Automated Reward Distribution

All Token rewards — including dividends and task-based incentives — are executed automatically by the system, eliminating human interference or manipulation risks.

Data & Privacy Compliance

The platform adheres to regional data regulations, enforces minimal data collection, and applies desensitization to protect user privacy.
